

# PRODUCT SHEET: LAT

Floating Floor Isolated Steel Battens

LAT is an isolated steel floor batten system for the support of wet or dry floating floors and sprung-floor applications for dance, sport and theatre.

## SYSTEM FEATURES:

- » LAT is available in three standard grades:
  - LAT-L (low stiffness)
  - LAT-M (medium stiffness)
  - LAT-H (high stiffness)
- » The pads within the LAT can be changed to meet project specific natural frequency and damping requirements
- » Standard LAT system heights are 30mm, 40mm and 50mm; however other thicknesses can be manufactured to order
- » LAT can support a variety of formwork such as timber, metal decking or cement particle board
- » LAT floating floors are extremely quick to install and therefore provide a very cost effective solution
- » LAT steel parts are hot-dip galvanised

## REQUIREMENTS:

The following information is required to enable our engineers to determine which LAT system is required:

- » Weight of the floating floor to be supported on the LAT system
- » The imposed dead and live loads on the floating floor
- » The required system natural frequency or sound insulation performance criteria
