

PRODUCT SHEET: MAT

Continuous Isolation Mat

MAT is a continuous mat for dry and wet floating floor constructions.

SYSTEM FEATURES:

- Cost effective
- Quick and easy to install
- The large range of isolation mats available allows us to choose the best mat for a given performance criterion

TYPES

MAT comes in many material types and thicknesses. Below are some of the standard materials used in the residential and hotel marketplace:

- MTC-4.5** - 4.5mm resin-bonded rubber material, used mainly for isolating ceramic tiles and other rigid floor finishes
- MTA-8/4** - 8mm thick profiled resin-bonded rubber mat usually used for isolating screeds
- MTA-15/7** - 15mm thick profiled resin-bonded rubber mat usually used for isolating screeds where high isolation performance is needed

REQUIREMENTS:

Our engineers will help you in selecting the right product and thickness using the following information:

- Required sound insulation or impact isolation performance
- The construction of the floor that the MAT will be laid upon
- The floor built-up that the MAT supports
